Water damage?

**Elastocoat[®]
stays tight:
seamless,
jointless,
crack-bridging**

BASF
The Chemical Company

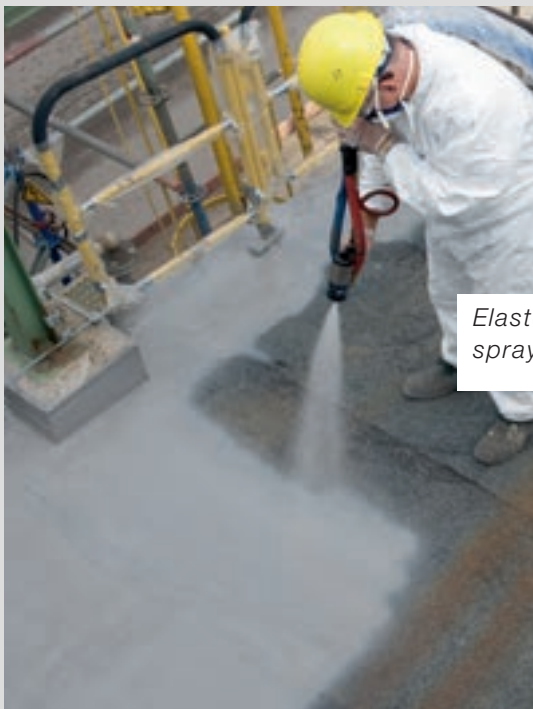

Elastocoat is the high-tech
polyurea made by Elastogran

Ramshackle, roof in need of repair.

Damaged seals let moisture penetrate the roof. With disastrous consequences: concrete corrosion, long-term weakening of the structure of the entire building, irreversible damage to valuable interiors. And the formation of mildew, which is expensive to remedy, threatens the health of the occupants. But leaking roofs are not God-given, they are preventable; with Elastocoat.

Elastocoat keeps it tightly sealed

Elastocoat is simply sprayed on. Finished.

Complicated roof penetrations, skylights, or air-conditioning shafts are trouble-spots for leaks. Elastocoat removes your anxieties. It simply seals the affected areas. Like a liquid film, Elastocoat adapts itself evenly over the surface geometry of the roof and covers it: seamless, jointless, durable. Elastocoat, the high-tech polyurea system from Elastogran, is simply sprayed onto the roof. It covers and seals vertical surfaces and it cures in a few seconds. And the cost? Compared to the high cost of damage and loss of rental income which can result from leaks, the cost of the high-grade Elastocoat roof-sealant is a profitable investment.

Roof sealing with Elastocoat. The facts:

- extremely fast curing; load-bearing after one hour
- high tolerance of temperature and humidity during application
- seamless sealing of penetrations and undercuts
- high adhesion to the surface
- high degree of crack-bridging, over 400% elongation at break
- high resistance to hydrolysis and ageing
- outstanding mechanical and chemical resistance
- free from solvents and catalysts

Elastocoat seals long-term, without joints.
